# 1. Precautions

1. **Warning:** Prior to repair, disconnect the power cord from the circuit breaker.
2. **Use proper parts:** Use only exact replacement parts. (Also, we recommend replacing parts rather than repairing them.)
3. **Use the proper tools:** Use the proper tools and test equipment, and know how to use them. Using defective tools or test equipment may cause problems later-intermittent contact, for example.
4. **Power Cord:** Prior to repair, check the power cord and replace it if necessary.
5. **Avoid using an extension cord,** and avoid tapping into a power cord. This practice may result in malfunction or fire.
6. **After completing repairs and reassembly,** check the insulation resistance. Procedure: Prior to applying power, measure the resistance between the power cord and the ground terminal. The resistance must be greater than 30 megohms.
7. **Make sure that the grounds are adequate.**
8. **Make sure that the installation conditions are satisfactory.** Relocate the unit if necessary.
9. **Keep children away from the unit while it is being repaired.**
10. **Be sure to clean the unit and its surrounding area.**

## 3. Operating Instructions and Installation

### 3-1 Operating Instructions

#### 3-1-1 Name & Function of Key in remote controller

NO		NAMED OF KEY	FUNCTION OF KEY	
1			On/Off Button. Use this button to start and stop air conditioner.	
2		<div></div> <div>▲ (UP)</div> <div>▼ (DOWN)</div>	Temp up button. If the ▲ button is pressed once, the setting temperature is increased by 1°C Temp down button. If the ▼ button is pressed once, the setting temperature is decreased by 1°C	
3		MODE	Each time you press this button, MODE is changed in the following order.  <div> : Auto Mode       : Fan Only Mode  : Cool Mode       : Heat Mode  : Dry Mode</div>	
4		TURBO	Use this button to provide heavy duty cooling & Heating for 30 minutes.	
5		OFF 	Set up the reserve or cancel the timer on and timer off quickly	
6	COVER		Use this button for sleep operation. (The SLEEP mode can be selected at COOL and HEAT mode.)	
7			Adjusts air flow vertically.	
8			Each time you press this button, FAN SPEED is changed in the following order. 	
9		TIMER	ON TIMER	Set up the time that operation start.
10			OFF TIMER	Set up the time that operation stop.
11			SET	Use this button to reserve the timer on.
12			CANCEL	Use this button to reserve or cancel the timer on and timer off.
13			 (UP)	If the  button is pressed once, the time increase by one minute during the time set mode, and ten minutes during the timer set mode.
14			 (DOWN)	If the  button is pressed once, the time decrease by one minute during the time set mode, and ten minutes during the timer set mode.
15			TIME	Without regard to ON/OFF condition in remote controller, use this button to set current time. Adjust the current time using   button. (Data can be transmitted after setting up the time)

### 3-1-2 Name & Function of Key in remote controller

1. **AUTO MODE** : In this mode, operation mode(COOL, HEAT) is selected automatically by the room temperature of initial operation.

Room Temp	Operation Type
Tr 21°C+ T	Cool Operation (Set Temp:24°C+ T)
21°C + T>Tr	Heat Operation (Set Temp : 22°C+ T)

T= -2°, -1°C, 0°C+1°C+2°C

T is controlled by setting temperature up( ▲ )/down( ▼ ) key of remote controller

2. **COOL MODE** : The unit operates according to the difference between the setting and room temperature. (18°C~30°C)
3. **HEAT MODE** : The unit operates according to the difference between the setting and room temperature.(16°C~30°C)  

\*Prevention against cold wind

: For about 3~5 minutes after initial operation, thermo control or “defrost”, the indoor fan will either not operate or operate very slowly, then switch to the selected fan speed. This period is to allow the indoor unit's heat-exchanger to prewarm before emitting warm air.  

\*High temperature release function

: The outdoor unit for and compressor ON/OFF control for safety operation, when the over-heat is heat exchanger of indoor unit.  

\*Defrost

: Deicing operation is controlled by outdoor unit's heat exchanger temperature and outdoor temperature and accumulating time of compressor's operation. De-ice end by sensing of the processing time by de-ice Condition.

4. **DRY MODE** :  
The unit operates in DRY mode.  
\*Protective function : Low temperature release. (Prevention against freeze)
5. **TURBO MODE** : This mode is available in AUTO, COOL, HEAT, DRY, FAN, SLEEP Mode.  
When this button is pressed at first, the air conditioner is operated “powerful” state for 30 minutes regardless of the set temperature, room temperature.  
When this button is pressed again, or when the operating time is 30 minutes, turbo operation mode is canceled and returned to the previous mode.  
\*But, if you press the TURBO button in DRY or FAN mode that is changed with AUTO mode automatically.
6. **SLEEP MODE** : Sleep mode is available only in COOL or HEAT mode.  
The operation will stop after 6 hours.  
\*In COOL mode : The setting temperature is automatically raised by 1°C each 1hour  
When the temperature has been raised by total of 2°C, that temperature is maintained.  
\*In HEAT mode : The setting temperature is automatically dropped by 1°C each 1hour.  
When the temperature has been dropped by total of 2°C, that temperature is maintained.
7. **FAN SPEED** : Manual / Auto  
Fan speed automatically varies depending on both the difference between setting and the room temperature.

## 8. COMPULSORY OPERATION :

For operating the air conditioner without the remote controller.

**\*AUTO** : The operating is the same function that AUTO MODE in the remote controller.

## 9. SWING : BLADE-H is rotated vertically by the stepping motor.

**\*Swing Set / Auto** : Press the  button under the remote control is displayed on LCD the  and the blades move up and down, about 3°. If the one more time press the  button, blades location is stop.

## 10. Quick OFF TIMER: OFF timer (quick timer) allows reservation or cancel the timer on and timer off quickly

When OFF timer button is pressed at operating state, LCD displays the polling state sequentially.

The LCD also displays the time remaining.

## 11. 24-Hour ON/OFF Real Setting Timer. : The air conditioner is turned ON at a specified time using **[ON TIMER]**.

**OFF TIMER** : The air Conditioner is turned OFF at a specified time using **[OFF TIMER]**.

**\*ON TIMER** : Only timer LED lights on.

**\*OFF TIMER** : Both timer and operation LED lights on.

## 12. BUZZER SOUND : Whenever the ON/OFF button is pressed or whenever change occurs to the condition which is set up or select, the compulsory operation mode, buzzer is sounded "beep"

## 13. SELF Diagnosis

The indoor unit observes operation of the air-conditioner, and displays the results of self diagnosis on display panel.

						Error mode
Operation	Defrost	Reservation	Power monitor	Fan	Turbo	
X	X	X	X	X	X	Operation off
	X	X	X	X	X	Power reset
X	X		X	X	X	Trouble of indoor temperature sensor (open/short)
	X		X	X	X	Temperature sensor trouble of the indoor heat exchanger (open/short)
X	X	X	X		X	Stuck of the indoor fan motor (trouble of rotation)
	X	X	X		X	Trouble of outdoor unit temperature sensor - Discharge temperature sensor - OLP temperature sensor of COMP top - Defrost temperature sensor - Outdoor temperature sensor
X	X		X		X	Communication trouble between the indoor and outdoor units (Misconnection or circuit trouble of the indoor and outdoor units)
X	X	X	X	X		Abnormal increase of the operation current
X	X		X	X		Occurring of the inverter circuit instantaneous over current.
X	X	X	X			Abnormal increase of the COMP. Top and discharge gas temperature.
			LAMP ON			Refrigerant Refill operation (test operation)

(Lamp status)

 : Lamp flickering    X: Lamp off

## 14. AUTO RESTART : The air conditioner starts immediately without control of remote controller when plugged.

It's the case that the Auto-restart function works.

\* Auto restart function is the convenient function where the operation state is memorized in the Memory IC during the black-out and the operation restarts when the power comes back.

## 3-2 Installation

---

### 3-2-1 Selecting Area for Installation

Select an area for installation that is suitable to the customer's needs.

#### 3-2-1(a) Indoor Unit

1. Make sure that you install the indoor unit in an area providing good ventilation. It must not be blocked by an obstacle affecting the airflow near the air inlet and the air outlet.
2. Make sure that you install the indoor unit in an area allowing good air handling and endurance of vibration of the indoor unit.
3. Make sure that you install the indoor unit in an area where there is no source of heat or vapor nearby.
4. Make sure that you install the indoor unit in an area from which hot or cool air is spread evenly in a room.
5. Make sure that you install the indoor unit in an area away from TVs, audio units, cordless phones, fluorescent lighting fixtures and other electrical appliances (at least 1 meter).
6. Make sure that you install the indoor unit in an area which provides easy pipe connection with the outdoor unit, and easy drainage for condensed water.
7. Make sure that you install the indoor unit in an area which is large enough to accommodate the measurements shown in figure on the next page.

#### 3-2-1(b) Outdoor Unit

1. Make sure that you install the outdoor unit in area not exposed to the rain or direct sun light.  
(Install a separate sunblind if exposed to direct sun light.)
2. Make sure that you install the outdoor unit in area allowing good air moment, not amplifying noise or vibration, especially to avoid disturbing neighbours.

(Fix the unit firmly if it is mounted in a high place.)

3. Make sure that you install the outdoor unit in area providing good ventilation and which is not dusty. It must not be blocked by any obstacle affecting the airflow near the air inlet and the air outlet.
4. Make sure that you install the outdoor unit in area free from animals or plants.
5. Make sure that you install the outdoor unit in area not blocking the traffic.
6. Make sure that you install the outdoor unit in area easy to drain condensed water from the indoor unit.
7. Make sure that you install the outdoor unit in area which provides easy connection within the maximum allowable length of a coolant pipe(10 meters).

#### Note

1. Add 10 grams of refrigerant (R-22) for every 1 meter if the pipe length exceeds the standard pipe length of 5 meters.
2. Maintain a height between the indoor and outdoor units of less than 3 meters.
8. Make sure that you install the outdoor unit in an area which is large enough to accommodate the measurements shown in figure on the next page.

#### 3-2-1(c) Remote Control Unit

1. Make sure that you install the remote control unit in an area free from obstacles such as curtains etc, which may block signals from the remote control unit.
2. Make sure that you install the remote control unit in an area not exposed to direct sunlight, and where there is no source of heat.
3. Make sure that you install the remote control unit in an area away from TVs, audio units, cordless phones, fluorescent lighting fixtures and other electrical appliances (at least 1 meter).

#### Caution :

It is harmful to the air conditioner if it is used in the following environments: greasy areas (including areas near machines), salty areas such as coast areas, areas where sulfuric gas is present such as hot spring areas. Contact your dealer for advice.

3-2-2 Installation diagram of indoor unit and outdoor unit

Piping may be laid to the rear, left, right or down .

①	Piping (Liquid) 1/4"		⑥	Clamper tube
②	9K BTU 12K BTU	Piping(Gas)3/8" Piping(Gas)1/2"	⑦	Installation plate
③	Installation tube		⑧	Pipe-connection
④	Vinyl tape		⑨	Screw
⑤	Putty		⑩	Drain hose

3-2-2(a) Fixing the Installation Plate

1. Determine the position of the pipe and drain hose hole using the right figure and drill the hole with an inner diameter of 65mm so that it slants slightly downwards.

2. If you are fixing the indoor unit to a... Then follow Steps...

Wall	3.
Window frame	4 to 6.

3. Fix the installation plate to the wall in a manner appropriate to the weight of the indoor unit.

If you are mounting the plate on a concrete wall with anchor bolts, the anchor bolts must not project by more than 20mm.

4. Determine the positions of the wooden uprights to be attached to the window frame.

5. Attach the wooden uprights to the window frame in a manner appropriate to the weight of the indoor unit.

6. Using tapped screws, attach the installation plate to the wooden uprights, as illustrated in the last figure opposite.

3-2-2(b) Purging the Unit

***On delivery, the indoor unit is loaded with an inert gas. All this gas must therefore be purged before connecting the assembly piping. To purge the inert gas, proceed as follows.***

Unscrew the caps at the end of each pipe.

Result : All inert gas escapes from the indoor unit.

- To prevent dirt or foreign objects from getting into the pipes during installation, do NOT remove the caps completely until you are ready to connect the piping.

## 3-2-2(c) Connecting the Assembly Cable.

**The outdoor unit is powered from the indoor unit via the assembly cable. If the outdoor unit is more than five metres away from the indoor unit, the cable must first be extended to a maximum of ten metres.**

1. Extend the assembly cable if necessary.
2. Open the front grille by pulling on the tabs on the lower right and left sides of the indoor unit.
3. Remove the screw securing the connector cover.
4. Pass the assembly cable through the rear of the indoor unit and connect the assembly cable to terminals C, N, L, E.
  - Each wire is labelled with the corresponding terminal number.
5. Firmly fix the ass'y cable with clamp wire holder.
6. Pass the other end of the cable through the 65mm hole in the wall.
7. Replace the connector cover, carefully tightening the screw.
8. Close the front grille.

## 3-2-2(d) Installing and Connecting the Indoor Unit Drain Hose

**Care must be taken when installing the drain hose for the indoor unit to ensure that any condensation water is correctly drained outside. When passing the drain hose through the 65mm hole drilled in the wall, check that none of the following situations occur.**

The hose must NOT slope upwards.

The end of the drain hose must NOT be placed in water.

Do NOT bend the hose in different directions.

Keep a clearance of at least 5cm between the end of the hose and the ground.

Do NOT place the end of the drain hose in a hollow.

**To install the drain hose, proceed as follows.**

1. If necessary, connect the 2-metre extension to the drain hose.
2. If you are using the extension, insulate the inside part of the extension drain hose with a shield.
3. Pass the drain hose under the refrigerant piping, taking care to keep the drain hose tight.
4. Pass the drain hose through the hole in the wall, making sure that it is sloping downwards, as shown in the illustrations above.

### 3-2-2(e) Outdoor unit installation

#### Wiring connection

1. Remove the Handle-Cabi RH.
2. Firmly connect the cable connector in the terminal block.
3. Fasten the terminal to the hole marked
4. Firmly fix the ass'y cable with clamp wire holder.
5. Assemble the Handle-Cabi RH.

#### Installing and Connecting the Outdoor Unit Drain Hose

**When using the air conditioner in the heating mode, ice may accumulate. During de-icing, the condensed water must be drained off safely. Consequently, you must install a drain hose on the outdoor unit, following the instructions below.**

- 1 Insert the drain plug into the drain hole on the underside of the outdoor unit.
- 2 Connect the drain hose to the drain plug.
- 3 Ensure that the drained water runs off correctly and safely.

3-2-2(f) Flare Modification

• Tools used

Flare modification procedure

- 1) Cut the pipe using a pipe cutter.
- 2) Remove burrs at the tip of the pipe cut.

Caution : Burrs not removed may result in leakage of gas.

- 3) Insert a flare nut into the pipe and modify flare.

Outer diameter	A(mm)
ø6.35mm	1.3
ø9.52mm	1.8
ø12.7mm	2.0

\* Unproper flaring

### 3-2-2(g) Air-Purge Procedure

- Use the refrigerant of the outdoor unit to purge air inside indoor unit and pipe.

1. Remove the caps from the 2-way valve(B) and the 3-way valve(A).

2. Turn the 2-way valve cock approx. 45° counterclockwise to open it. Close it about 10 seconds later.

3. Check refrigerant leakage of each joint parts (A, B, C & D in right figure)

not  
leaking

Leaking

If leaking, tighten the flare nut one more time.  
If continues to leak, although the pipe fixing area has been tightened again, repair the leaking area.

4. Open the 2-way valve again.

5. Open the service valve cap of the 3-way valve and press the needle valve to discharge gas for 3 seconds and leave it for about 1 minute.  
Repeat the above procedure for 3 times to purge air.

6. Open the 2-way valve and 3-way valve completely

7. Close the cap of each valve.

8. Check each valve for leakage.

### 3-2-2(h) Refrigerant Refill

- **Refill an air-conditioner with refrigerant when refrigerant has been leaked at installing or using**

3-2-2(i) Refrigerant Adjustment

Class	At installation		At service	
Connection Pipe Length	Air-Purge Method	Refrigerant Adjustment	Air-Purge Method	Refrigerant Quantity
5m Max.	Refer to the detailed Air-Purge Procedure	Unnecessary	Purge air using a vaccum pump or an additional refrigerant cylinder.	refer to specification sheet
5~10m		Add 10g of refrigerant (R-22) for every 1m.		Add 10g of refrigerant (R-22) for every 1m.

3-2-2(j) Flare unt fixing torque

Outter diameter	Torque (kg-cm)	
	Fixing Torque	Final Torque
ø 6.35 (9000Btu, 12000Btu) (Liquid Side)	160	200
ø 9.52 (9000Btu) (Gas Side)	300	350
ø 12.7 (12000Btu) (Gas Side)	500	550

## 3-2-2(k) "Pump down" Procedure

- **Pump down' shall be carried out when an evaporator is replaced or when the unit is relocated in another area.**

**Relocation of the air conditioner**

- Refer to this procedure when the unit is relocated.
1. Carry out the pump down procedure (refer to the details of 'pump down').
  2. Remove the power cord.
  3. Disconnect the assembly cable from the indoor and outdoor units.
  4. Remove the flare nut connecting the indoor unit and the pipe.  
At this time, cover the pipe of the indoor unit and the other pipe using a cap or vinyl plug to avoid foreign material entering.
  5. Disconnect the pipe connected to the outdoor unit.  
At this time, cover the valve of the outdoor unit and the other pipe using a cap or vinyl plug to avoid foreign material entering.
  6. Make sure you do not bend the connection pipes in the middle and store together with the cables.
  7. Move the indoor and outdoor units to a new location.
  8. Remove the mounting plate for the indoor unit and move it to a new location.

# MEMO

## 3. Operating Instructions and Installation

### 3-1 Operating Instructions

#### 3-1-1 Name & Function of Key in remote controller

NO		NAMED OF KEY	FUNCTION OF KEY	
1			On/Off Button. Use this button to start and stop air conditioner.	
2		<div></div> <div>▲ (UP)</div> <div>▼ (DOWN)</div>	Temp up button. If the ▲ button is pressed once, the setting temperature is increased by 1°C Temp down button. If the ▼ button is pressed once, the setting temperature is decreased by 1°C	
3		MODE	Each time you press this button, MODE is changed in the following order.  <div> : Auto Mode       : Fan Only Mode  : Cool Mode       : Heat Mode  : Dry Mode</div>	
4		TURBO	Use this button to provide heavy duty cooling & Heating for 30 minutes.	
5		OFF 	Set up the reserve or cancel the timer on and timer off quickly	
6	COVER		Use this button for sleep operation. (The SLEEP mode can be selected at COOL and HEAT mode.)	
7			Adjusts air flow vertically.	
8			Each time you press this button, FAN SPEED is changed in the following order. 	
9		TIMER	ON TIMER	Set up the time that operation start.
10			OFF TIMER	Set up the time that operation stop.
11			SET	Use this button to reserve the timer on.
12			CANCEL	Use this button to reserve or cancel the timer on and timer off.
13			 (UP)	If the  button is pressed once, the time increase by one minute during the time set mode, and ten minutes during the timer set mode.
14			 (DOWN)	If the  button is pressed once, the time decrease by one minute during the time set mode, and ten minutes during the timer set mode.
15			TIME	Without regard to ON/OFF condition in remote controller, use this button to set current time. Adjust the current time using   button. (Data can be transmitted after setting up the time)

### 3-1-2 Name & Function of Key in remote controller

1. **AUTO MODE** : In this mode, operation mode(COOL, HEAT) is selected automatically by the room temperature of initial operation.

Room Temp	Operation Type
Tr 21°C+ T	Cool Operation (Set Temp:24°C+ T)
21°C + T>Tr	Heat Operation (Set Temp : 22°C+ T)

T= -2°, -1°C, 0°C+1°C+2°C

T is controlled by setting temperature up( ▲ )/down( ▼ ) key of remote controller

2. **COOL MODE** : The unit operates according to the difference between the setting and room temperature. (18°C~30°C)
3. **HEAT MODE** : The unit operates according to the difference between the setting and room temperature.(16°C~30°C)  
**\*Prevention against cold wind**: For about 3~5 minutes after initial operation, thermo control or “defrost”, the indoor fan will either not operate or operate very slowly, then switch to the selected fan speed. This period is to allow the indoor unit's heat-exchanger to prewarm before emitting warm air.  
**\*High temperature release function**: The outdoor unit for and compressor ON/OFF control for safety operation, when the over-heat is heat exchanger of indoor unit.  
**\*Defrost** : Deicing operation is controlled by outdoor unit's heat exchanger temperature and outdoor temperature and accumulating time of compressor's operation. De-ice end by sensing of the processing time by de-ice Condition.

4. **DRY MODE** :  
The unit operates in DRY mode.  
**\*Protective function** : Low temperature release. (Prevention against freeze)
5. **TURBO MODE** : This mode is available in AUTO, COOL, HEAT, DRY, FAN, SLEEP Mode.  
When this button is pressed at first, the air conditioner is operated “powerful” state for 30 minutes regardless of the set temperature, room temperature.  
When this button is pressed again, or when the operating time is 30 minutes, turbo operation mode is canceled and returned to the previous mode.  
**\*But**, if you press the TURBO button in DRY or FAN mode that is changed with AUTO mode automatically.
6. **SLEEP MODE** : Sleep mode is available only in COOL or HEAT mode.  
The operation will stop after 6 hours.  
**\*In COOL mode** : The setting temperature is automatically raised by 1°C each 1hour  
When the temperature has been raised by total of 2°C, that temperature is maintained.  
**\*In HEAT mode** : The setting temperature is automatically dropped by 1°C each 1hour.  
When the temperature has been dropped by total of 2°C, that temperature is maintained.
7. **FAN SPEED** : Manual / Auto  
Fan speed automatically varies depending on both the difference between setting and the room temperature.

## 8. COMPULSORY OPERATION :

For operating the air conditioner without the remote controller.

**\*AUTO** : The operating is the same function that AUTO MODE in the remote controller.

## 9. SWING : BLADE-H is rotated vertically by the stepping motor.

**\*Swing Set / Auto** : Press the  button under the remote control is displayed on LCD the  and the blades move up and down, about 3°. If the one more time press the  button, blades location is stop.

## 10. Quick OFF TIMER: OFF timer (quick timer) allows reservation or cancel the timer on and timer off quickly

When OFF timer button is pressed at operating state, LCD displays the polling state sequentially.

The LCD also displays the time remaining.

## 11. 24-Hour ON/OFF Real Setting Timer. : The air conditioner is turned ON at a specified time using **[ON TIMER]**.

**OFF TIMER** : The air Conditioner is turned OFF at a specified time using **[OFF TIMER]**.

**\*ON TIMER** : Only timer LED lights on.

**\*OFF TIMER** : Both timer and operation LED lights on.

## 12. BUZZER SOUND : Whenever the ON/OFF button is pressed or whenever change occurs to the condition which is set up or select, the compulsory operation mode, buzzer is sounded "beep"

## 13. SELF Diagnosis

The indoor unit observes operation of the air-conditioner, and displays the results of self diagnosis on display panel.

						Error mode
Operation	Defrost	Reservation	Power monitor	Fan	Turbo	
X	X	X	X	X	X	Operation off
	X	X	X	X	X	Power reset
X	X		X	X	X	Trouble of indoor temperature sensor (open/short)
	X		X	X	X	Temperature sensor trouble of the indoor heat exchanger (open/short)
X	X	X	X		X	Stuck of the indoor fan motor (trouble of rotation)
	X	X	X		X	Trouble of outdoor unit temperature sensor - Discharge temperature sensor - OLP temperature sensor of COMP top - Defrost temperature sensor - Outdoor temperature sensor
X	X		X		X	Communication trouble between the indoor and outdoor units (Misconnection or circuit trouble of the indoor and outdoor units)
X	X	X	X	X		Abnormal increase of the operation current
X	X		X	X		Occurring of the inverter circuit instantaneous over current.
X	X	X	X			Abnormal increase of the COMP. Top and discharge gas temperature.
			LAMP ON			Refrigerant Refill operation (test operation)

(Lamp status)

 : Lamp flickering    X: Lamp off

## 14. AUTO RESTART : The air conditioner starts immediately without control of remote controller when plugged.

It's the case that the Auto-restart function works.

\* Auto restart function is the convenient function where the operation state is memorized in the Memory IC during the black-out and the operation restarts when the power comes back.

## 3-2 Installation

---

### 3-2-1 Selecting Area for Installation

Select an area for installation that is suitable to the customer's needs.

#### 3-2-1(a) Indoor Unit

1. Make sure that you install the indoor unit in an area providing good ventilation. It must not be blocked by an obstacle affecting the airflow near the air inlet and the air outlet.
2. Make sure that you install the indoor unit in an area allowing good air handling and endurance of vibration of the indoor unit.
3. Make sure that you install the indoor unit in an area where there is no source of heat or vapor nearby.
4. Make sure that you install the indoor unit in an area from which hot or cool air is spread evenly in a room.
5. Make sure that you install the indoor unit in an area away from TVs, audio units, cordless phones, fluorescent lighting fixtures and other electrical appliances (at least 1 meter).
6. Make sure that you install the indoor unit in an area which provides easy pipe connection with the outdoor unit, and easy drainage for condensed water.
7. Make sure that you install the indoor unit in an area which is large enough to accommodate the measurements shown in figure on the next page.

#### 3-2-1(b) Outdoor Unit

1. Make sure that you install the outdoor unit in area not exposed to the rain or direct sun light.  
(Install a separate sunblind if exposed to direct sun light.)
2. Make sure that you install the outdoor unit in area allowing good air moment, not amplifying noise or vibration, especially to avoid disturbing neighbours.

(Fix the unit firmly if it is mounted in a high place.)

3. Make sure that you install the outdoor unit in area providing good ventilation and which is not dusty. It must not be blocked by any obstacle affecting the airflow near the air inlet and the air outlet.
4. Make sure that you install the outdoor unit in area free from animals or plants.
5. Make sure that you install the outdoor unit in area not blocking the traffic.
6. Make sure that you install the outdoor unit in area easy to drain condensed water from the indoor unit.
7. Make sure that you install the outdoor unit in area which provides easy connection within the maximum allowable length of a coolant pipe(10 meters).

#### Note

1. Add 10 grams of refrigerant (R-22) for every 1 meter if the pipe length exceeds the standard pipe length of 5 meters.
2. Maintain a height between the indoor and outdoor units of less than 3 meters.
8. Make sure that you install the outdoor unit in an area which is large enough to accommodate the measurements shown in figure on the next page.

#### 3-2-1(c) Remote Control Unit

1. Make sure that you install the remote control unit in an area free from obstacles such as curtains etc, which may block signals from the remote control unit.
2. Make sure that you install the remote control unit in an area not exposed to direct sunlight, and where there is no source of heat.
3. Make sure that you install the remote control unit in an area away from TVs, audio units, cordless phones, fluorescent lighting fixtures and other electrical appliances (at least 1 meter).

#### Caution :

It is harmful to the air conditioner if it is used in the following environments: greasy areas (including areas near machines), salty areas such as coast areas, areas where sulfuric gas is present such as hot spring areas. Contact your dealer for advice.

3-2-2 Installation diagram of indoor unit and outdoor unit

①	Piping (Liquid) 1/4"		⑥	Clamber tube
②	9K BTU 12K BTU	Piping(Gas)3/8" Piping(Gas)1/2"	⑦	Installation plate
③	Installation tube		⑧	Pipe-connection
④	Vinyl tape		⑨	Screw
⑤	Putty		⑩	Drain hose

3-2-2(a) Fixing the Installation Plate

1. Determine the position of the pipe and drain hose hole using the right figure and drill the hole with an inner diameter of 65mm so that it slants slightly downwards.

2. If you are fixing the indoor unit to a... Then follow Steps...

Wall	3.
Window frame	4 to 6.

3. Fix the installation plate to the wall in a manner appropriate to the weight of the indoor unit.

If you are mounting the plate on a concrete wall with anchor bolts, the anchor bolts must not project by more than 20mm.

4. Determine the positions of the wooden uprights to be attached to the window frame.

5. Attach the wooden uprights to the window frame in a manner appropriate to the weight of the indoor unit.

6. Using tapped screws, attach the installation plate to the wooden uprights, as illustrated in the last figure opposite.

3-2-2(b) Purging the Unit

**On delivery, the indoor unit is loaded with an inert gas. All this gas must therefore be purged before connecting the assembly piping. To purge the inert gas, proceed as follows.**

Unscrew the caps at the end of each pipe.

Result : All inert gas escapes from the indoor unit.

- To prevent dirt or foreign objects from getting into the pipes during installation, do NOT remove the caps completely until you are ready to connect the piping.

## 3-2-2(c) Connecting the Assembly Cable.

**The outdoor unit is powered from the indoor unit via the assembly cable. If the outdoor unit is more than five metres away from the indoor unit, the cable must first be extended to a maximum of ten metres.**

1. Extend the assembly cable if necessary.
2. Open the front grille by pulling on the tabs on the lower right and left sides of the indoor unit.
3. Remove the screw securing the connector cover.
4. Pass the assembly cable through the rear of the indoor unit and connect the assembly cable to terminals C, N, L, E.
  - Each wire is labelled with the corresponding terminal number.
5. Firmly fix the ass'y cable with clamp wire holder.
6. Pass the other end of the cable through the 65mm hole in the wall.
7. Replace the connector cover, carefully tightening the screw.
8. Close the front grille.

## 3-2-2(d) Installing and Connecting the Indoor Unit Drain Hose

**Care must be taken when installing the drain hose for the indoor unit to ensure that any condensation water is correctly drained outside. When passing the drain hose through the 65mm hole drilled in the wall, check that none of the following situations occur.**

The hose must NOT slope upwards.

The end of the drain hose must NOT be placed in water.

Do NOT bend the hose in different directions.

Keep a clearance of at least 5cm between the end of the hose and the ground.

Do NOT place the end of the drain hose in a hollow.

**To install the drain hose, proceed as follows.**

1. If necessary, connect the 2-metre extension to the drain hose.
2. If you are using the extension, insulate the inside part of the extension drain hose with a shield.
3. Pass the drain hose under the refrigerant piping, taking care to keep the drain hose tight.
4. Pass the drain hose through the hole in the wall, making sure that it is sloping downwards, as shown in the illustrations above.

### 3-2-2(e) Outdoor unit installation

#### Wiring connection

1. Remove the Handle-Cabi RH.
2. Firmly connect the cable connector in the terminal block.
3. Fasten the terminal to the hole marked
4. Firmly fix the ass'y cable with clamp wire holder.
5. Assemble the Handle-Cabi RH.

#### Installing and Connecting the Outdoor Unit Drain Hose

**When using the air conditioner in the heating mode, ice may accumulate. During de-icing, the condensed water must be drained off safely. Consequently, you must install a drain hose on the outdoor unit, following the instructions below.**

- 1 Insert the drain plug into the drain hole on the underside of the outdoor unit.
- 2 Connect the drain hose to the drain plug.
- 3 Ensure that the drained water runs off correctly and safely.

3-2-2(f) Flare Modification

• Tools used

Flare modification procedure

- 1) Cut the pipe using a pipe cutter.
- 2) Remove burrs at the tip of the pipe cut.

Caution : Burrs not removed may result in leakage of gas.

- 3) Insert a flare nut into the pipe and modify flare.

Outer diameter	A(mm)
ø6.35mm	1.3
ø9.52mm	1.8
ø12.7mm	2.0

\* Unproper flaring

### 3-2-2(g) Air-Purge Procedure

- Use the refrigerant of the outdoor unit to purge air inside indoor unit and pipe.

1. Remove the caps from the 2-way valve(B) and the 3-way valve(A).

2. Turn the 2-way valve cock approx. 45° counterclockwise to open it. Close it about 10 seconds later.

3. Check refrigerant leakage of each joint parts (A, B, C & D in right figure)

not  
leaking

Leaking

If leaking, tighten the flare nut one more time.  
If continues to leak, although the pipe fixing area has been tightened again, repair the leaking area.

4. Open the 2-way valve again.

5. Open the service valve cap of the 3-way valve and press the needle valve to discharge gas for 3 seconds and leave it for about 1 minute.  
Repeat the above procedure for 3 times to purge air.

6. Open the 2-way valve and 3-way valve completely

7. Close the cap of each valve.

8. Check each valve for leakage.

### 3-2-2(h) Refrigerant Refill

- **Refill an air-conditioner with refrigerant when refrigerant has been leaked at installing or using**

3-2-2(i) Refrigerant Adjustment

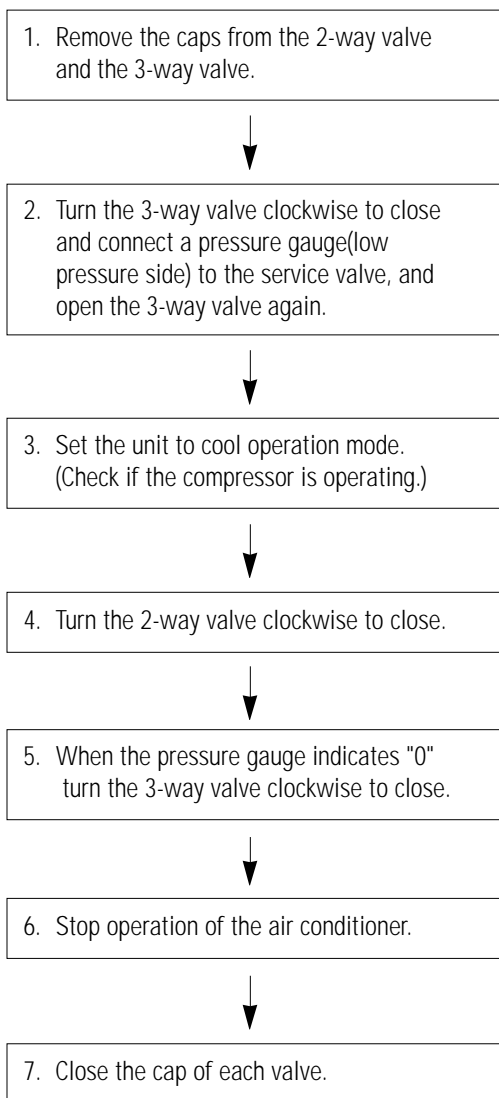

Class	At installation		At service	
Connection Pipe Length	Air-Purge Method	Refrigerant Adjustment	Air-Purge Method	Refrigerant Quantity
5m Max.	Refer to the detailed Air-Purge Procedure	Unnecessary	Purge air using a vaccum pump or an additional refrigerant cylinder.	refer to specification sheet
5~10m		Add 10g of refrigerant (R-22) for every 1m.		Add 10g of refrigerant (R-22) for every 1m.

3-2-2(j) Flare unt fixing torque

Outter diameter	Torque (kg-cm)	
	Fixing Torque	Final Torque
ø 6.35 (9000Btu, 12000Btu) (Liquid Side)	160	200
ø 9.52 (9000Btu) (Gas Side)	300	350
ø 12.7 (12000Btu) (Gas Side)	500	550

## 3-2-2(k) "Pump down" Procedure

- **Pump down' shall be carried out when an evaporator is replaced or when the unit is relocated in another area.**

**Relocation of the air conditioner**

- Refer to this procedure when the unit is relocated.
1. Carry out the pump down procedure (refer to the details of 'pump down').
  2. Remove the power cord.
  3. Disconnect the assembly cable from the indoor and outdoor units.
  4. Remove the flare nut connecting the indoor unit and the pipe.  
At this time, cover the pipe of the indoor unit and the other pipe using a cap or vinyl plug to avoid foreign material entering.
  5. Disconnect the pipe connected to the outdoor unit.  
At this time, cover the valve of the outdoor unit and the other pipe using a cap or vinyl plug to avoid foreign material entering.
  6. Make sure you do not bend the connection pipes in the middle and store together with the cables.
  7. Move the indoor and outdoor units to a new location.
  8. Remove the mounting plate for the indoor unit and move it to a new location.

# MEMO

## 4. Disassembly and Reassembly

Stop operation of the air conditioner and remove the power cord before repairing the unit.

### 4-1 Indoor Unit

No	Parts	Procedure	Remark
1	Front Grille	<p>1) Stop the air conditioner operation and block the main power.</p> <p>2) Separate tape of front panel upper.</p> <p>3) Contract the second finger to the left, and right handle and pull to open the inlet grille.</p> <p>4) Take the left and right filter out.</p> <div style="border: 1px solid black; padding: 5px; margin: 10px 0;"> <p>* Take the Deodorizing and Electrostatic filter out. (ONLY "1" and "5" Series models)</p> </div> <p>5) Loosen one of the right fixing screw and separate the terminal cover.</p> <p>6) Loosen three fixing screws of front grille.</p> <p>7) Pull the upper left and right of discharge softly for the outside cover to be pulled out.</p> <p>8) Pull softly the lower part of discharge and push it up.</p> <p><b>Caution;</b> Assemble the front panel and fix the hooks of left and right.</p>	    

## Disassembly and Reassembly

No	Parts	Procedure	Remark
2	Ass'y Tray Drain.	<ol style="list-style-type: none"> <li>1) Do "1", above. Separate the drain hose from the extension drain hose.</li> <li>2) Take the display PCB out. (Center of indoor unit)</li> <li>3) Loosen three fixing screws of left and right</li> <li>4) Pull tray drain out from the back body.</li> </ol>	 
3	Electrical Parts (Main PCB)	<ol style="list-style-type: none"> <li>1) Do "1", "2", above</li> <li>2) Take all the connector of PCB upper side out. (Inclusion Power cord)</li> <li>3) Separate the outdoor unit connection wire from the terminal block.</li> <li>4) If pulling the Main PCB up, it will be taken out. (Separate the TRANS hook. it before).</li> </ol>	
4	Heat Exchanger	<ol style="list-style-type: none"> <li>1) Do "1" and "2", "3", above</li> <li>2) Loosen two fixing earth screws of right side.</li> <li>3) Separate the connection pipe.</li> <li>4) Separate the bush body at the upper side and holder at the rearside.</li> <li>5) Loosen the two fixing screws of left side.</li> <li>6) Lifting the heat exchanger up a little to push the up side for separation from the indoor unit.</li> </ol>	 

No	Parts	Procedure	Remark
5	Fan Motor and Cross Fan	<ol style="list-style-type: none"><li>1) Do "1" "2" "3" "4", above.</li><li>2) Loosen the fixing three screws and separate the motor holder.</li><li>3) Loosen the fixing screw of fan motor. (By use of M3 wrench)</li><li>4) Separate the fan motor from the fan.</li><li>5) Separate the fan from the left holder bearing.</li></ol>	 

## 4-2 Outdoor Unit

Take care of the electrical shock by contact on the charging parts before the discharge after power off. (If takes approximately 2minutes to discharge.)

No	Parts	Procedure	Remark
1	Common Work & Ass'y-control Out	<ol style="list-style-type: none"> <li>1) Loosen the fixing screw and separate the Handle-Cabi RH.</li> <li>2) Separate the Cable-Connector Wire from the Terminal-Block.</li> <li>3) Loosen six fixing screws and separate the Cabi-Upper.</li> <li>4) Loosen four fixing screws from the Ass'y-Control Out.</li> <li>5) Separate the Terminal-Housing from the Ass'y-Control Out.</li> <li>6) Separate the Ass'y-Control Out from the outdoor unit.</li> <li>7) Loosen five fixing screws and separate the Cabi-Side.</li> </ol>	   

No	Parts	Procedure	Remark
2	Fan-Motor	<p>1) Loosen fixing screw of the Guard-Fan.</p> <p>2) Turn the Guard-Fan to separate from the Cabi-Front.</p> <p>4) Remove the nut flange (Turn to the right to remove, as it is a left hand screw)</p> <p>5) Separate the fan.</p> <p>6) Loosen four fixing screws to separate the motor.</p>	  
3	Heat Exchanger	<p>1) Do "1", above.</p> <p>2) Loosen four fixing screws of Ass'y-Frame and Partition.</p> <p>3) Disassemble the inlet and outlet pipe by welding.</p> <p>4) Separate the heat exchanger.</p>	

No	Parts	Procedure	Remark
4	Compressor	<div>1) Do "1", above.</div> <div>2) Open the terminal cover of compressor and unscrew the connection terminal.</div> <div>3) Disassemble the inlet and outlet pipe of compressor by welding.</div> <div>4) Disassemble the inlet and outlet pipe of condenser by welding</div> <div>5) Loosen the three bolts of the lower part.</div> <div>6) separate the compressor.</div>	<div></div> <div></div>

---

## 5. Troubleshooting

---

Since the inverter air conditioner is equipped with Electrical control circuits at both Indoor & outdoor unit, the trouble shooting shall be performed according to the error mode.

Inside the controller of the outdoor unit (inverter), the large capacity of electrolytic condenser so that it takes the time to discharge after the power off since the electrical charge remains (the charging voltage DC 340V).

Take care of the electrical shock by contact on the charging part before the discharge after the power off. (It takes approximately 2 minutes to discharge).

### 5-1 Basic items for trouble shooting

---

1) Is the power source proper?

The power source shall be in the range of the rated voltage  $\pm 10\%$ . If it is out of this range, it may cause the abnormal operation.

2) Is the connection made between the indoor and outdoor unit?

The connection between indoor and outdoor unit shall be performed with 4 wire. (connection cable of indoor and outdoor unit + ground wire).

3) The phenomena as follows are not out of order.

NO	Phenomena	Cause and reason
1	The operation is not done.	<ul style="list-style-type: none"><li>• Is the power off or the power unplugged?</li><li>• Does it stop because it is the completion time?</li><li>• Unplug and plug again the power source for 2 minutes.</li></ul>
2	The wind comes out but the heating/cooling is not performed.	<ul style="list-style-type: none"><li>• Is the filter clogged with dust or dirty?</li><li>• Is there any direct light on the outdoor unit or any obstacle against it?</li><li>• Is the selected temperature too high? Lower the selected temperature lower than the current one (during cooling).</li><li>• Is the selected temperature too low? Raise the desired temperature than the current one?</li><li>• Is the "Fan only Mode" operation?</li></ul>
3	The remote controller does not operate.	<ul style="list-style-type: none"><li>• Is the battery run out?</li><li>• Is the battery inserted in the wrong way(+, -)?</li><li>• Is the detection part of the indoor unit blocked?</li><li>• Does it interfered with the radio of neon sign?</li></ul>
4	The wind volume is not adjusted.	<ul style="list-style-type: none"><li>• Is the operation selected among one of Auto / Dry / Turbo / Sleeping?</li><li>• The temperature setting is not required since the wind volume set automatically.</li><li>• Check again at the state of Cooling / Fan only / Heating.</li></ul>
5	The reservation does not operate.	<ul style="list-style-type: none"><li>• Is the current time input? The reservation can be made only when the current time is input.</li><li>• Is it on the stop condition? The reservation can not be made at the stop state. Press the Operation / Stop button to make the reservation.</li></ul>
6	The temperature is not set.	<ul style="list-style-type: none"><li>• Is the operation selected among the Dry / Turbo / Sleeping / Fan only Mode. Since the temperature is automatically set, the temperature setting is not required.</li><li>• Check again at the cooling/heating state.</li><li>• The standard temperature <math>\pm 2^{\circ}\text{C}</math> during the automatic operation.</li></ul>
7	The operation lamp continues to be flickering.	<ul style="list-style-type: none"><li>• Push the Operation / Stop button.</li><li>• Unplug and plug the power source.</li></ul>
8	The immediate operation starts without control of remote controller when plugged	<ul style="list-style-type: none"><li>• It is the case that the auto restart function works. # Auto restart function is the convenient function where the operation state is memorized in the Memory IC during the blackout and the operation restarts when the power comes back.</li></ul>

### 5-3 Sequence of trouble shooting for inverter aircon

### 5-3-1 (A) Check of indoor unit control board

- ▷ Unplug the power cord and plug it after 5 seconds.
- ▷ Open the grille of indoor unit and press the on/off switch located inside to operate the air conditioner.
- If the air conditioner operates, check the remocon and indoor unit display board.
- If the air conditioner does not operate, check according to the sequence of the followings:
- ▷ Check sequence of indoor unit control board
  - Step 1 : Check whether two wires of power cord (Sky-blue, brown) are connected correctly to the control board.
    - Sky -blue : connected to TB71
    - Brown : connected to #4 terminal of RY71.
    - (If it is connected to #3 of RY71, the power is not supplied) ⚠Take care.
  - Step 2: Check whether the wire connected to the terminal block is connected correctly to the control board.
    - Sky -blue : connected to TB72
    - Brown : connected to #3 terminal of RY71.
    - Black : Connected to CN75
  - Step 3 : Check whether the fuse (F701) on the control board is normal. (3.15 [A]/250[V])
    - If the fuse is broken, replace it with the new one.
  - Step 4 : check the output of transformer on the control board (TN71).
    - Input power AC 240V, 50 Hz—IC 01 output: DC 12V  
IC 02 output : DC 5V

### 5-3-2 (B)(C) Display board and remocon check of indoor unit

- ▷ Check whether the connection wire of Display board is correctly connected to CN92 connector.
- ▷ Check the voltage of remocon battery. - the voltage of one battery shall be higher than about 1.4 V, and then the remocon operates normally.
- ▷ Check whether the neon sign is on and the 3 wave long fluorescent lamp is on around the indoor unit. - After putting all the lamps of the indoor out and then operates it by remocon. If it operates with the remocon, it is the abnormality due to the interference from the lights of lamps. (Aircon unit is normal).

### 5-3-3 (D)(E) Check the indoor temperature sensor and indoor heat exchanger temperature sensor.

Take out the thermistor connected to the connector (CN41) of control board of indoor unit and measure the resistance between two wires and if it is same as follows: it is normal but if not, replace it.

Ambient temperature (°C)	15°C	20°C	25°C	30°C	35°C	40°C	The error of data of within 1%.
Resistance of thermistor [K ]	14.68	12.09	10	8.31	6.94	5.83	

### 5-3-4 (F) Check of indoor unit fan motor

- ▷ Check whether the wire of fan motor is connected to the connector of control board (CN43, CN73) of indoor unit.
- ▷ Check whether the error mode displays after the strong revolution for approximately 15 seconds since aircon is on.
  - > In case the error mode displays after the fan motor is rotating for 15 seconds → Defect of HALL IC of fan motor and Control board
  - > In case that the error mode displays without running of fan motor after 15 seconds. → Operate with the pin of SSR(SS71) short of indoor unit control board and then if the fan motor does not run, it is the fan motor defect.  
If it rotates, it is the defect of control board (SS71, IC07, IC04).

### 5-3-5 (G) Check of communication line between the indoor unit and outdoor unit

(Communication error mode)

#### 1) Check of connection

- ▷ Check whether the cable wire connecting the indoor unit with outdoor unit is correctly connected to the C, N, R terminal. (If the wire is connected reversely, the communication error occurs)
- ▷ If the cable connecting the indoor unit and outdoor unit is longer than 20 M, error mode occurs (shorten the cable length).

(Check of indoor unit)

- ▷ Check whether the connection wire of the terminal block and control of indoor unit board is correct.
  - Sky -blue : connected to TB72
  - Brown : connected to #3 terminal of RY71.
  - Black : Connected to CN75

(Check of outdoor unit)

- ▷ Check whether the connection wire of the terminal block and control board of outdoor unit is correct.
  - Sky -blue : connected to TB1
  - Brown : Fuse terminal - connected to TB72
  - Black : Connected to CN71(Connected to the R701 line)

#### 2) Check of power supply to the outdoor unit

After operation of aircon, select the turbo mode and approximately 3minutes later, check whether the red color lamp of control board (to be seen if the top cover of outdoor unit) is on.

-> If the red lamp (LED 3) is not on, check the power part of control board of outdoor unit.

Check the connection of reactor, polarity of C-ELEC (2200μF/400V) and connection of two diode - bridge.

-> If the red lamp (LED3) is on and green lamp is flickering, it is normal.

### 5-3-6 (H)(I) Check of discharge temperature sensor and comp top OLP temperature sensor.

▷ Connector of outdoor unit control board

(PIN#3,4 of CN41 - discharge temperature sensor)

Pin1, 2 - Take out the thermistor connected to comp top OLP temperature sensor and measure the resistance between two wires and if it is same as follows, it is normal but if not, replace.

Ambient temperature (°C)	0°C	10°C	20°C	30°C	40°C	50°C	The error of data of within 5%.
Resistance of thermistor [K ]	553	362	242	166	165	82	

### 5-3-7 (J)(K) Check the defrost temperature sensor and outdoor temperature sensor

▷ Connector of outdoor unit control board

(PIN#1,2 of CN41 - outdoor temperature sensor)

Pin3, 4 - Take out the thermistor connected to defrost temperature sensor and measure the resistance between two wires and if it is same as follows, it is normal but if not, replace it.

Ambient temperature (°C)	15°C	20°C	25°C	30°C	35°C	40°C	The error of data of within 1%.
Resistance of thermistor [K ]	14.68	12.09	10	8.31	6.94	5.83	

### 5-3-8 (L) Check of operation current abnormal rise mode

▷ The operation abnormal current mode is the protection control for the safe operation by detecting the operation current of inverter aircon by the current sensor on the control board.

▷ If the operation current abnormal rise occurs,

The ventilation is not good because the outdoor unit is installed wrong (the ambient temperature is higher than 50 °C)

-> Reinstall the outdoor unit so that the good ventilation can be made.

If the Refrigerant is overcharged.

-> Check the amount of Refrigerant.

If the comp is locked.

-> Replace the comp.

If the comp is operating without the revolution of fan motor.

-> Check the fan motor connector, replace the fan motor.

If the protection cover is operating with bending to the outdoor.

-> Take out the protection cover.

If two outdoor units are operating face to face. (the bad ventilation is made)

-> Reinstall the outdoor unit for the good ventilation.

The air circulation is bad due to the attachment of falling leaves

-> Take away the leaves for the good ventilation.

Check the elements of current sensor block of the outdoor control board.

R801 — 1 K

R802 — 1.5 K

R803 — 15 K

### 5-3-9 (M) Check of instantaneous over-current protection of inverter circuit.

- ▷ Inverter instantaneous over-current protection mode is the mode to be actuated in order to prevent the damage of elements from the peak current of inverter circuit elements.
- ▷ In case that the inverter circuit instantaneous over-current protection mode actuates.

(condition of installation)

The ventilation is not good because the outdoor unit is installed wrong (the ambient temperature is higher than 50 (°C) )

-> Reinstall the outdoor unit so that the good ventilation can be made.

In case that the operation is made with the cover bent of the outdoor unit.

-> Take out the cover.

If two outdoor units are operating face to face, (the bad ventilation is made)

-> Reinstall the outdoor unit for the good ventilation.

The air circulation is bad due to the attachment of falling leaves.

-> Take away the leaves for the good ventilation.

If the Refrigerant is overcharged.

-> Check the amount of Refrigerant.

(Unit defect)

If the comp is locked.

-> Replace the comp.

If the comp is operating without the revolution of fan motor.

-> Check the fan motor connector and replace the fan motor.

In case the parts of the control board is damaged.

-> Replace simultaneously the inverter control board and the power TR.

If only the inverter control board is replaced with the state the power TR. is damaged, the control board is damaged again.  
(Same as for the vice versa of the above.)

### 5-3-10 (N) Check of the comp Top OLP and discharge gas temperature abnormal rise.

- ▷ If the comp top temperature and the discharge gas temperature rises higher than a certain level, it protects the circuit.
- ▷ If the comp top OLP temperature and the discharge gas temperature rises abnormally,

(Condition of installation)

The ventilation is not good because the outdoor unit is installed wrong (the ambient temperature is higher than 50 (°C) )

-> Reinstall the outdoor unit so that the good ventilation can be made.

In case that the operation is made with the cover bent of the outdoor unit.

-> Take out the cover.

If two outdoor units are operating face to face, (the bad ventilation is made)

-> Reinstall the outdoor unit for the good ventilation.

The air circulation is bad due to the attachment of falling leaves

-> Take away the leaves for the good ventilation.

If the refrigerant is insufficient.

-> Fill up the amount of refrigerant.

**(Unit defect)**

**If the comp is locked.**

-> **Replace the comp.**

**If the comp is operating without the revolution of fan motor**

-> **Take out the protection cover.(cooling mode)**

-> **Check the fan motor connector and replace the fan motor.**

## 5-4 Check method of major parts

NO	Parts	Check method
1	Inverter controller (outdoor unit controller)	<ol style="list-style-type: none"> <li>1. Open the top cover of outdoor unit.</li> <li>2. Separate the connector (3P) connecting the comp from the outdoor unit controller. (wire to wire connector).</li> <li>3. Operate the aircon in the turbo mode. (operate the outdoor 3 minutes after)</li> <li>4. Measure the voltage across the terminals of comp connector (3p) from the power TR module if the outdoor fan is running.</li> </ol> <p>( If normal)</p> <p>AC voltage of each terminal is similar.</p> <ul style="list-style-type: none"> <li>•Phase U-V : AC voltage is measured (80V- 190V)</li> <li>•Phase V-W : AC voltage is measured (80V- 190V)</li> <li>•Phase W-U : AC voltage is measured (80V- 190V) (at AC220V)</li> </ul> <p>(If abnormal)</p> <ul style="list-style-type: none"> <li>•The AC voltage is not measured from any one(or two) of Phase U-V, V-W or W-U. <ul style="list-style-type: none"> <li>- Check the power TR module.</li> <li>- Check the other parts</li> </ul> </li> </ul>
